

## VENTURIONE

### VenturiOne™ Version 3 Flow Cytometry Data Analysis Software

#### VenturiOne® V3 **It's Fast**

Analyse 400 data files at once in less than 10 seconds

- Batch processing allows automatic analysis of up to 400 files, ideal when using 96 or 384 well-plates
- Easily apply modifications to all aspects of your files on a per file or global basis
- Intuitive navigation through your batch, changing background calculation options and defining output methods, such as printing or exporting

#### VenturiOne® V3 **It's Simple**

Simple, quick and selectable report generation

- Greater flexibility and speed in generating page based reports for publication; plots, statistics, text or images can be added in a push or pull fashion
- Customisable formatting of your report including replication of a report page avoiding the need for individual page set up

#### VenturiOne® V3 **It's Just the Beginning...**

Committed to development

- Customer feedback received has resulted in enhancement to the scaling feature including customisable scales allowing more user specific display of data
- Third version of software released this year
- Designed, developed and manufactured according to international standards and best practice

### VenturiOne® **It's First Class for Flow**
